RBH INTRODUCES FOLLOW UP TO AWARD WINNING COMPACT THEATER SYSTEM

Minneapolis, MN – CEDIA 2002 Booth #SR-10 – RBH Sound Inc. introduces an addition to their Compact Theater 5.1 and 7.1 packages—the Compact Theater-MAX. The CT-MAX utilizes the C-4 center speaker in a typical LCR (left/center/right) arrangement to offer an even more seamless surround sound experience.

“We’ve long thought that using the same speaker for the left, center, right and surround channels leads to a virtually seamless, and accurate presentation of the source material,” stated Daren Egan, sales manager for RBH. *“Creating an LCR system by utilizing the existing C-4 center speaker was a natural extension to the successful Compact Theater line.”*

The enclosure for the C-4 is constructed from a die-cast metal making the speaker extremely inert, while the non-parallel sidewalls help eliminate internal standing waves that can degrade the sound. The dual 4-inch aluminum woofers flank a 1-inch silk dome tweeter in a typical D’Apollito array that allows the speaker in the center channel to be placed horizontally on top of a television, or stood upright on a stand to mirror the left and right channels.

The MS-8.1 subwoofer features not one, but two 8-inch aluminum drivers powered by an internal 200-watt amplifier. This compact powerhouse delivers impressive bass all the way down to 40-Hertz! The MS-8.1 also features volume control, variable crossover, and speaker-level binding posts for setup of the MAX system in a sub/sat configuration.

Because décor integration is as important as sound integration RBH offers the CT-MAX system in black or white, and also offers their own wall mounting brackets and optional floor stands.

Suggested retail pricing of the Compact Theater-MAX \$1,495 for the 5.1 system and is shipping now.

Since 1976, RBH Sound has been designing, engineering and crafting high-performance loudspeaker systems, delivering superior acoustic reproduction at sensible prices.
