RBH ADDS MUCH ANTICIPATED MC-616C TO MC THEATER SERIES MKII

Indianapolis, IN – CEDIA Expo 2003 – Booth #1216 & SR-6 – RBH Sound Inc.

introduces the MC-616C MKII L/C/R speaker to their newly redesigned MC Theater Series. The MC-616C MKII rounds out the MC Theater Series MKII and provides the consumer and installer an alternative to the smaller MC-414C MKII.

The MC-616C MKII makes its debut amongst the MC Theater Series MKII speakers featuring redesigned baffles that hide the “mechanics” of the speaker such as the screws securing the woofers to the cabinet. This MC-616C MKII also incorporates RBH’s proprietary Resonance Damping Alloy Baffle™ (RDAB), which functions to damp cabinet vibrations and minimize tweeter diffraction.

The MC-616C MKII features two 6-½-inch aluminum woofers flanking a new 1-inch aluminum tweeter with a ceramic magnet structure that allows it to handle more power with better high frequency extension. Like all the MKII speakers the tweeter is protected by polyswitch circuitry to prevent damage if overdriven. By utilizing two 6-½-inch drivers, the MC-616C MKII has extended dynamic and low frequency range when compared to the smaller MC-414C MKII which features 4-inch woofers and makes it a better sonic match to the MC-6C MKII bookshelf and the MC-6CT MKII tower speakers.

Beyond being a mere center channel, the MC-616C is a classic L/C/R (left/center/right) design meaning it can also be used as the main and surround speakers in a home theater system for a completely seamless presentation of movies and surround sound music.

Suggested retail pricing of the MC-616C is \$449/each and will ship mid-October, 2003.

Since 1976, RBH Sound has been designing, engineering and crafting high-performance loudspeaker systems, delivering superior acoustic reproduction at sensible prices.
