RBH ADDS NEW TOWER SPEAKER TO THEIR AWARD-WINNING SIGNATURE SERIES LINE

New speaker incorporates two 6.5-inch woofers in a slim compact tower.

Layton, UT -- RBH Sound introduces the 641-SE, a new addition to their extensive Signature Series line of loudspeakers. Available in more than 30 real hardwood veneer finishes, these compact towers will please audio and home theater enthusiasts, as well as those conscious of their décor.

The 641-SE is a three-way tower speaker featuring two 6.5-inch aluminum woofers that can effortlessly handle floor-shaking bass information down to 45-Hertz! RBH uses high quality, hand-built second order crossovers to seamlessly integrate the woofers with the 4-inch aluminum mid-range and 1-inch silk-dome tweeter. As with all of their Signature Series speakers, RBH uses aluminum bass and midrange drivers for their speed and accuracy, and silk-dome tweeters for their neutral and lush high frequency extension.

RBH uses only the highest quality parts and goes to great lengths to ensure quality craftsmanship when building their Signature Series line of speakers. Kapton[®] voice-coils provide for minimal distortion and high temperature resistance, while the tweeter is cooled and damped using a magnetic liquid that is injected into the voice-coil gap to guarantee unforgettable imaging and a longer lasting tweeter. The 641-SE is soundly

constructed using MDF (medium density fiberboard) materials and is internally braced to ensure structural integrity and completely eliminate unwanted cabinet resonance.

Suggested retail price of the 641-SE is \$1,500/pair in black oak wood grain, and \$1875/pair in any of thirty real hardwood veneer finishes.

Since 1976, RBH Sound has been designing, engineering and crafting high-performance loudspeaker systems, allowing them to provide the tools necessary for superior acoustic reproduction at sensible prices.
