

SI-663

IN-WALL/LCR DUAL TWO-WAY SPEAKER

Once these speakers are installed in the wall only the black or white grille is visible.

The SI-663 in-wall speaker is the perfect high-performance solution for home theaters where the center channel is intentionally removed for décor or design requirements. Featuring a unique dual-channel crossover network and two sets of speaker inputs, the SI-663 can be configured for use as either a dual-channel speaker or a conventional single-channel speaker. In dual-channel configuration, a pair of them plays stereo center channel audio in addition to the left and right channels, fundamentally eliminating the need for a dedicated center channel speaker. For situations where a third SI-663 can be used as a dedicated center channel, the trio can be wired in single-channel configuration, allowing each to discretely provide left, center or right channels for a seamless high-performance front sound stage.
