IN-WALL SPEAKERS AND SUBWOOFERS

SI-744

IN-WALL SURROUND SPEAKER

The SI-744 is a unique surround channel solution, since it is capable of single or dual-channel operation. When wired in dual channel mode, the SI-744's front-firing drivers can play side surround channel audio and the rear-firing drivers can play rear surround channel audio. This configuration can provide all four surround channels in a 7.1-channel surround sound system from one pair of SI-744s. This can be very beneficial when a room's design prevents another set of rear speakers from being integrated into the surround system. When wired in single-channel mode, the SI-744 presents its listeners with a bi-polar dispersed sound field for increased surround coverage.
