

ULTRA HIGH END by rbh sound

IL SOVRANO

Designed to reign supreme, IL SOVRANO is built with no stone left unturned. The diamond shape and sleek edges represent royalty and luxury that combines form and function. With a fine piano gloss finish and elegant shape, this subwoofer is sure to be a statement piece in any room.

At the heart of the design, is the legendary 21 inch driver by RBH Sound. Engineered with a 100mm max excursion, sandwiched carbon fiber cone, low distortion, and high power handling for ultimate finesse and power. Featuring an open, neodymium motor structure, aluminum shorting ring, copper sleeve, and vented pole piece.

The enclosure is well braced and built with an acrylic polymer solid surface material at it's core and wrapped with HDF for a flawless finish. With a density akin to granite, the acrylic polymer provides a sturdy foundation that translates to near-zero resonance and an enclosure that won't be subject to the powerful influence of the driver maximizing performance with minimal kinetic energy loss. The results: deepest frequency extension possible with a tight, accurate, and musical sound. Truly the best of all worlds!

Subwoofer is complimented with G.A.D.S. technology. It is an advanced patent pending technology that provides more mass and supreme acoustic damping properties, making the system even more inert and enhancing musicality.

Specifications:

Dimensions: 24" H x 32" W x 24" D (without feet)

Weight: 350lbs

Frequency response: 12hz-100hz (anechoic response)

External Amplifier: 4000 watts, factory tuned with DSP

High quality pure copper, carbon fiber finished binding posts

8 AWG internal wiring

G.A.D.S. Technology inside

MSRP: \$28,000
