

T-2

TOWER MODULAR SPEAKER

The T-2 consists of a T-1 atop a 1010-SEN subwoofer. As a mirror-image pair, the T-2 excels in providing the most discriminating listener with an amazing aural experience. The T-2 is capable of handling large amounts of power while delivering the highest fidelity and performance in even the largest home theater or listening room. The image-focusing driver alignment and clarity of the T-1 mated with the 1010-SEN's phenomenal bass deployment make the T-2 among the best performing freestanding speakers RBH Sound has ever produced. Shown here in South American rosewood veneer finish.

TOWER MODULAR SPEAKER

DIMENSIONS & CONFIGURATIONS

The mid-range and bass drive units of the T System are of the highest quality and feature cutting-edge aluminum cone technology. The two 10-inch long-throw subwoofers deliver plentiful amounts of low frequency information. Mid-bass through lower treble frequencies are accurately reproduced through four 6½-inch woofers offering extended dynamic range and lower distortion. Three 1-inch silk dome high performance tweeters provide generous crystal clear high frequencies with unbelievable detail and accuracy. The woofers and tweeters are arranged in a dispersion-averaging alignment that focuses the sound at the listening position for unbelievable imaging. Working in harmony, all drive units are governed by an extensive filter network to convey the sonic realism you'd expect from this reference-grade speaker system.
